

Spring 2025 Webinars

Enhancing Classroom Practices with Generative AI

Presenter Deidre Harrington

In this webinar, we will explore how generative AI can be used as a teaching tool to enhance literacy practices and personalized learning. You will receive an overview of generative AI, including ethical considerations, training on prompt engineering, and 12 practical examples of how generative AI can save you time. We will conclude with a discussion on the ethical future of generative AI.

Tuesday, April 29

4:00 p.m.–5:30 p.m

PRESENTER

Deidre Harrington

This is Deidre Harrington's 20th year in education. She holds a Bachelor of Education and a Master of Library and Information Science from Western University. Over the years, she has served in various roles, including classroom teacher, eLearning instructor, summer school teacher, department head, Learning Technologies Coordinator, and Ministry course writer.

Deidre's goal is to empower educators to integrate technology effectively to enhance student engagement while also recognizing that mistakes are inevitable, and learning can be messy. She has shared her digital misadventures in professional development presentations both locally and at provincial conferences such as BOLTT and OTKR12.

Deidre says she currently has the best job in Thames Valley as a Teacher-Librarian at a large, rural school. Additionally, she chairs the Teacher Education Liaison Committee at Western University where she enjoys collaborating with Teacher Candidates and Faculty.
